Hello, I'm Aymar Dossou. I will be graduating from Promineo Tech Coding bootcamp as a Software Developer in the late winter of 2023. In the past I was team leader of the Technical Support department for Allstate Benefits, in charge of the Lincoln Nebraska and Jacksonville Florida offices where I've worked on building a troubleshooting procedure of the customer benefits website to improve customers experience.

Currently, I'm acquiring skills in JavaScript, HTML + CSS and React.js. It's a challenging Andover, but I'm thankful for it. I get a chance to learn a programming language used to make websites interactive with elements that the user can interact with, such as drop-down menus, modal windows, and contact forms. I am very passionate about programming and technology in general and I have always dreamed to be part of this world.

This learning journey will add more skills to my portfolio. In addition to these new skills, I can speak 3 other languages fluently (French, Ewe, and Goun) and I'm currently learning Spanish. I am a song writer, a mental health security specialist, a computer system technician, and a mentor

I am also a father of 5 who cherishes spending time with his children. I am a Marvel fan and an avid reader. I enjoy going to the movies or watching a tv show with my wife Blessing. I make the best ribs in the mid-west, and I love sharing my experience with the young generation.

I am disciplined, honest, perseverant and I have a strong work ethic. My strengths are:

- Teamwork, innovation, attention to details, openness to learning new things and the ability to work under pressure.

Areas I can improve in are:

- Adjusting to a disorganized environment and Conflict resolution.
